

Growing a Global Community of Women in Technology.

We are a group of developers, designers, and digital marketing professionals that have come together to build a global community of women in technology. We are teaching women digital literacy to empower them to create their own businesses, pursue technical careers, and build a network of leaders around the world.

Based in the US, our mission is to spread technical and leadership skills to women around the world so they can build the lives they want to live. Biztech was our first workshop in Nairobi, Kenya. We accepted 10 girls into the program, gave them smart phones, and provided training and resources to build their own businesses. Now we are working with The Visionaria Network in Peru to bring technical literacy and inspiration to a group of women who are part of a 4-year leadership institute.

Giving women access to and training with technology paves the path to not only leveling the technology gap between men and women, but to giving women the power they need to lead economically independent lives. By teaching women around the world technical skills, they will not only affect change in their own lives, but their communities as well.

“By teaching women ICT skills and teaching them to become digitally literate, we’ve seen examples where a domestic worker, working outside of her country, has been able to go back home, create a business and employ lots of people,” Bogdan said.

“The number of success stories is large.”

- Doreen Bogdan

Chief of Strategic Planning and Membership at ITU

Curriculum overview.

Inspire women to learn about technology, create a basic online presence, and an understanding of what they can do professionally with technical skills.

Build an online website and network to show their work, business, and professional skills. Teach participants to become a thought leader in the space, and learn the skills to continue teaching themselves and others around them.

Teach and mentor on the skills to develop and build products or businesses through engineering and design.

Kubmo is built by a community of women. We are looking for builders, educators, and connectors in the technical and entrepreneurial space to help us find communities to work with, create quality curriculum, and inspire others to find independence while staying rooted in their culture. To start the conversation, email us at team@kubmo.org.

Help us to empower women to become technology leaders in their communities.
